FIGURE J-7 – Initial Guess of the Field. Conjecture initiale du champ.

as the *FWHM* and with random phase. For example if the grid is set to 65, the *FWHM* of the pulse will be 8 (rounded down). Intensity noise is a field with no phase and a random intensity. When custom noise is selected, the custom settings options become enabled and the user can choose the width the self-phase modulation and linear chirp of the gaussian pulse as the initial field.

The user manual of the Femtosoftware program states that :

*“In most cases, the selection of the initial field will not have a large effect in how the pulse is retrieved or in the final answer. On rare occasions, however, we have noticed an effect for SHG FROG. There are certain pulses (even theoretically generated ones) that appear to stagnate for certain initial guesses, yet retrieve with ease for other initial guesses.”*⁵
